

Bamboo powder straw

The premium solution – not to be confused with regular bamboo solutions

The NCD Bamboo Powder Straw is a unique, new and innovative straw. It is the ultimate eco-friendly straw that looks, acts and feels like plastic but is made combining bamboo powder with PLA.

This straw is fully compostable and has all the qualities and user experience of a plastic straw. It does not require industrial composting.

It will not crack nor get soggy whether in a hot, cold, or frozen beverage. It can be in your drink for hours at a time and keep its integrity. The Bamboo Powder Straw is available in all the standard sizes and diameters with flat or oblique ends. It can come wrapped or bulk unwrapped.
